Open House

Please join us on May 21th for our open house event, where you can explore our facility and meet our dedicated team to engage with industry experts and experience our culture.

Don't miss this opportunity to connect and learn more about who we are and what we do.

Mathew Wilhelm
President & CEO

Exciting Next Steps For Space

We're excited to announce another significant milestone in our journey toward seeing InterLnX assemblies thrive in space. Marc Summersett has recently achieved certification as an IPC J-STD-001 Space Addendum trainer, marking another pivotal step forward for us.

It's crucial that components built for space can endure the extreme conditions, such as vibrations and thermal cycling, encountered during missions. This second certification demonstrates our commitment to realizing space-based projects and the investments we're making to cultivate our team into subject matter experts.

Driving Excellence

At the beginning of this new year, we made strategic changes within our quality department aimed at optimizing our processes and ensuring the highest standards of quality across all facets of our operations. Richard Baxter has assumed the role of Quality Engineer, while Evie Becher is now the Quality Control Lead. By investing in our talented team, we're better equipped to meet our customers' changing needs and explore new opportunities.

Looking Forward

As we progress through 2024, our focus remains on enhancing our capabilities and expanding our footprint in the space industry. We're committed to ongoing training initiatives, certifications, and infrastructure improvements to ensure we're well-positioned to bring in new business.

Spotlight on Success
